Thomas (Raoul Meir) Erlich

Information Systems Engineering Student | Software & AI Engineering

thomaserlich3@gmail.com | +972-54-771-4451 | github.com/haThomas3 | linkedin.com/in/thomas-erlich

PROFESSIONAL SUMMARY

4th-year Information Systems Engineering student at the Technion (B.Sc. expected February 2027), available for a full-time position. I build and ship working software: an LLM-based receipt-processing system used in a real business, local RAG pipelines, and an anytime MaxSAT solver in C++. Comfortable across the stack, from design and tests to deployment and debugging.

EDUCATION

B.Sc., Information Systems Engineering | Technion | Dean's List, Winter 2025-26 *2023 to Feb 2027 (expected)*

Pre-Academic Preparatory Program (Mechina), Technion | Graduated with Honors *2022 to 2023*

Relevant Coursework: Foundations of AI • Machine Learning • Intelligent Interactive Systems • Secure Programming • Operating Systems • Distributed Information Systems • Data Structures & Algorithms • Databases • Software Engineering

SKILLS

Programming: Python, SQL, Java, C, C++, JavaScript

AI & LLM: OpenAI & Gemini APIs, RAG, embeddings, FAISS, Ollama (local models), n8n AI agents, Claude Code

Systems & Tools: Linux, Git, GitHub Actions (CI), PostgreSQL, SQLite, Streamlit, FastAPI, Django, pytest, Azure VM setup

Languages: Hebrew (Native), English (Highly Proficient), French (Intermediate)

TECHNICAL PROJECTS

Receipts & Inventory System | Freelance for Pulcinella, Kadima *2026*

Python | Streamlit | PostgreSQL | Gemini API | n8n | GitHub Actions

- Phone-first app that reads the business's receipts with an LLM, runs 18 automatic checks on each one, and turns them into stock and spending reports.
- Owned it end to end with the business owner: requirements, design, code, deployment and ongoing changes. 68 tests running in CI against a real Postgres.

IntelSAT | Anytime MaxSAT Solver (B.Sc. capstone, team of 5) *2025 to 2026*

C++ | MaxSAT | Local Search | Linux | Git

- Extended Intel's open-source IntelSAT solver with anytime MaxSAT optimization; placed 3rd out of 13 faculty project teams.
- Set up the Linux Azure VM benchmarking environment, contributed to the Weighted Mrs. Beaver local-search component, and debugged across the solver pipeline. The enhanced solver ran up to ~4x faster than EvalMaxSAT on 28 BiOptSAT instances from MSE2022.

SkinSens | AI Skincare Advisor *2025 to 2026*

Python | Streamlit | OpenAI / Gemini APIs | SQL

- Built with one partner: an advisor that creates personalized routines and flags ingredient conflicts, integrating multiple AI providers. Owned debugging and QA across backend and UI, and validated recommendations with real users.

Local RAG Assistant & Career Pipeline *2026*

Python | FAISS | FastAPI | Ollama | Claude Code | LaTeX

- Local-first RAG assistant that answers only from your own documents, with sources, and runs offline with local embeddings and models.
- Career Pipeline: a Claude Code skill that turns a job posting into a tailored one-page LaTeX resume using only facts from a verified profile, with a duplicate gate and a tracker.

PROFESSIONAL EXPERIENCE

IT Assistant & Technical Support | Technion *2025 to Present*

- Troubleshoot connectivity, equipment, and system-access issues for faculty and staff, and maintain equipment records, alongside a full course load.

International Healthcare Customer Service Representative | DavidShield Insurance Agency *2021 to 2022*

- Supported Israeli clients abroad in English and Hebrew on health insurance and emergency cases, coordinating with international clinics and hospitals.

SCHOLARSHIP & MENTORSHIP

Hibbur Israeli Scholarship Recipient | Technion

- Mentored three new-immigrant students with 100+ hours of academic, language, and social-integration support.
